

Technology Landscape

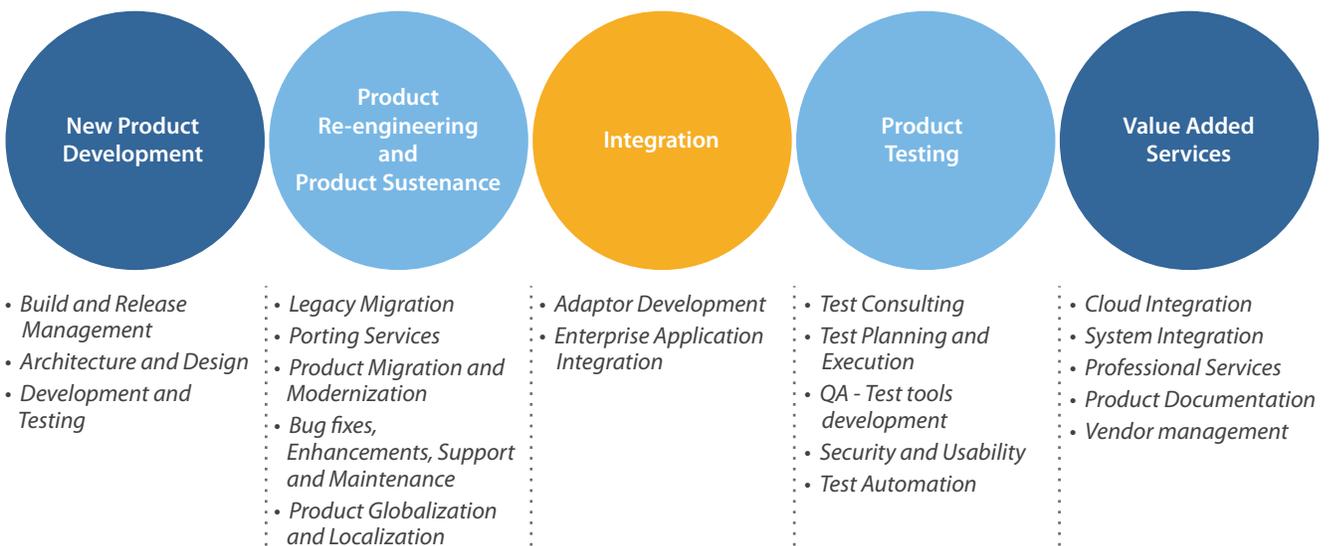

ISV's today are facing a rapid proliferation of SaaS, Cloud Computing, Mobility and Social Media technologies in the Software Product Development landscape. The increasing pace of innovation has in turn shortened the life cycle of software products and has brought a shift in focus of ISV's. From one time license revenue to recurring SaaS and maintenance revenues, mobile device support/applications and cloud based services.

To enable ISV's leverage the ongoing shift towards attaining faster time-to-market, adapt existing products to emerging technologies and new markets and enhance product features on-the-fly, the Application Services team at Omnitech introduces a comprehensive offshore suite of services, including new product development, product re-engineering, product sustenance, integration and product testing to organisations across the globe.

Services Overview

Omnitech Offshore Software Product Development (OSPD) services comprise a comprehensive portfolio of services which address the spectrum of challenges ISV's face in terms of expertise, productivity, scalability and cost. As a seamless extension of your development team, we accentuate on the right combination of processes, people, tools and technology to realise your business outcome.

Our services portfolio spans across the entire product life cycle i.e. from product conceptualisation to product extensions. Our portfolio of services includes:

Why Omnitech

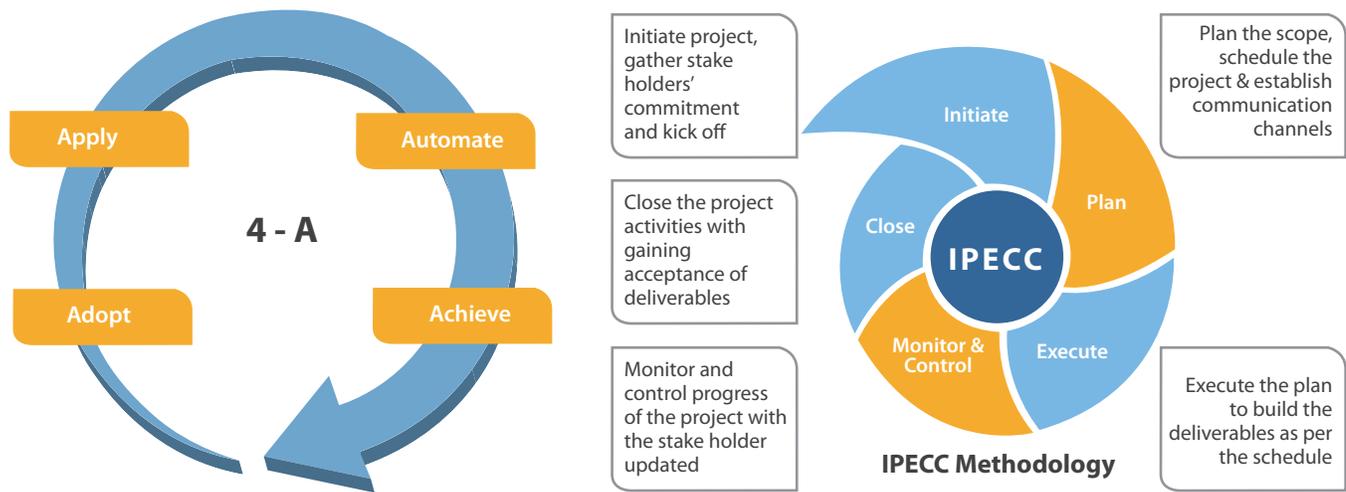

Given the stronghold of our Global Delivery team, they bring together decades of experience working on Software Product development addressing diverse client needs. Omnitech works with the sole vision of empowering its customers to maximize the value of their IT investments by driving the highest quality standards. Our offerings are backed with :

- Customer Centric Consultative Approach
- Proven Methodologies and Expertise
- Highly Qualified Professionals
- Diverse Industry Exposure and Experience
- Established Project Management Practices with Certified Professionals

Our technology practices have evolved into Centers of Excellence (CoE), helping customers fulfill stated and unstated business needs, and find new sources of innovation.

Service Delivery Methodologies

Technology adoption in an organization is a difficult process which has to be planned and monitored effectively for success. Omnitech's Application Services division has its unique 4A methodology to ease organizations into using new technologies. All endeavors within application services are managed by skilled and certified PMP's who use the IPECC methodology to achieve project objectives.

Service Delivery Model

The service delivery model of our OSPD services is divided into three Individual set of models. The placement of all the models is strategic in nature to assure well-defined service results. Quality is a vital part of our delivery and we ensure constant up-gradation and refining of the processes.
