

## Payment and Settlement System Services

Indian banking industry, today is in the midst of another IT revolution. Combinations of regulatory and competitive reasons have led to increasing importance of total banking automation in the Indian Banking Industry. Technological innovation in general and information technology (IT) applications in particular, have had a major effect in banking and finance sectors.

However over the years, it is been observed that a gap has grown between how most businesses work and IT functions, which means that businesses has changed, but the systems have not. Current IT infrastructure is not conducive to on demand. The current infrastructure on which the RTGS and NDS applications have been running have become old and obsolete. The principal vendors supplying the hardware and software have stopped supporting the old technology.

Keeping with the pace at which IT is changing, RBI has also decided to upgrade its Payment and Settlement System with the latest versions of the technology. RBI has also decided that all the banks upgrade their IT infrastructure to the current version as a mandate.

## Service Offerings

RBI has advised all the participating members to upgrade their RTGS/NDS system at the earliest. Keeping this time frame in mind and utilizing our vast experience in designing and implementing the RTGS/NDS setups, we have proactively negotiated with various vendors to size different and correct combinations that will suitably fit your requirement and budget. This will also help you to avoid the hassles of time-consuming multi-vendor co-ordination.

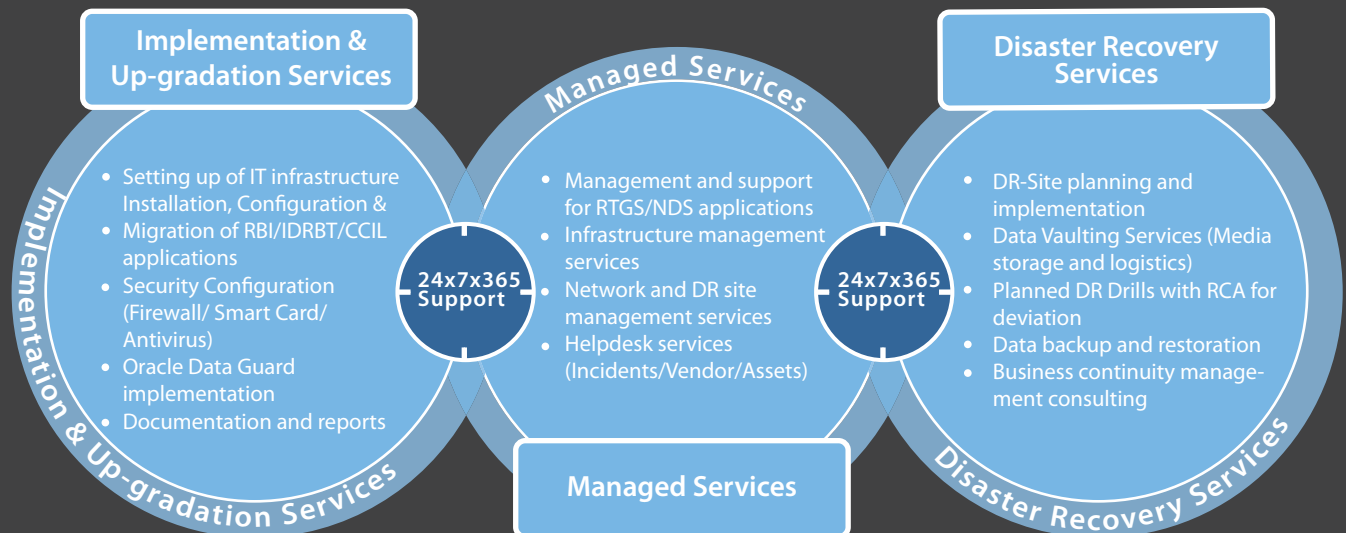

## Why Omnitech

Appreciating the significance of payment and settlement system in day to day banking and financial transactional activities we, thoughtfully designed an end-to-end one stop solution window for organizations. The successful installations have been professionally completed in a committed time and have won is rare accolades in BFSI sector. We at Omnitech since then has consistently strived and built our technology expertise in payment and settlement systems.

- End to End Solution on RTGS/NDS (Hardware/Software/Services)
- Proven track record (More than 20+ RTGS/NDS solution success stories)
- Strategic consulting on RTGS/NDS implementation
- Domain expertise combined with comprehensive and cost effective services
- Unique delivery models suiting customer requirements and RBI standards
- Customized and committed Service Level Agreements (SLA's) with 24x7x365 support
- Efficient reporting and review mechanism

## Service Delivery Methodology

Keeping a pace with the latest technology along with its adoption is a difficult process in any organization. Implementation and upgradation of such technologies are mandatory to be planned and monitored effectively for success. We follow the PDCA (Plan-Do-Check -Act) methodology to ease organizations into using new technologies.

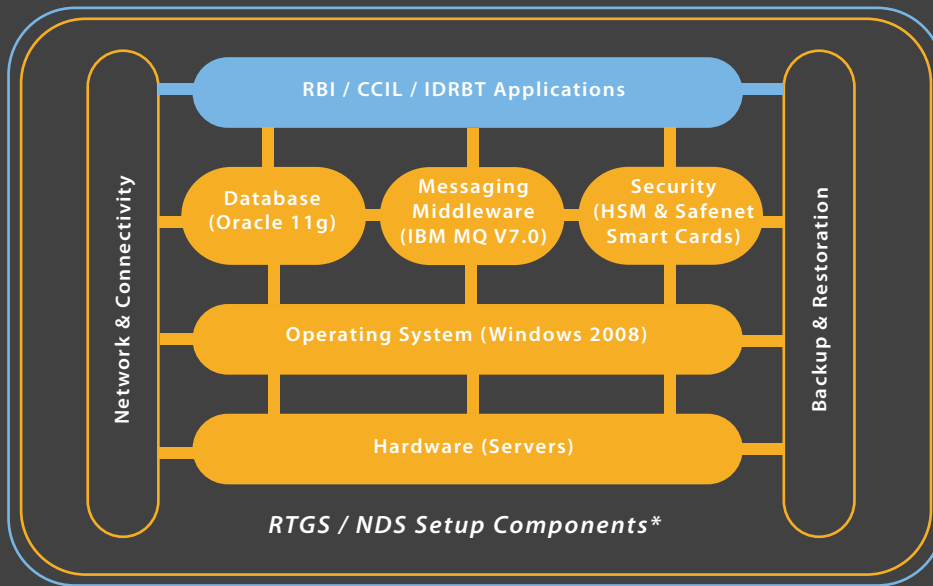

# We are goal sharers

We are agile, flexible, responsive and convinced that our success lies in yours. You can be sure that you'll only work with our 'A' team who will give your project the time and attention it deserves - no struggling with multiple, faceless layers that delay decision making.

## RTGS/NDS Service Component Layers

Our services are provided across all layers of any RTGS/NDS setup with components as per RBI mandate. Being premier partner to principals like IBM, Microsoft & Oracle and having expert RTGS & NDS implementation skills, we can help your organization on these up-gradations by providing you best value.

\* Components as per RBI mandate

### Client

The client is one of the oldest urban co-operative banks and leading multi-state scheduled co-operative banks in the country reputed for its quality services

### Client's Requirement

To implement RTGS (Real Time Gross Settlement System)

### Technology Challenge

To provide them with end-to-end solution in a simpler and secured way without affecting their day to day business processes

### Omnitech Solution

RTGS implementation with the right kind of connectivity while maintaining the RTOs & RPOs at very low level

### Customer Benefits

- An end-to-end with one window vendor solution was implemented
- Faster implementation without any business interruptions

### Success Stories

The client is a leading financial services company with interests in consumer finance, asset management and securities

To integrate structured financial messaging system (SFMS) with their core banking system – Finacle to facilitate straight their processing modes

- Changes were supposed to be made with minimum impact on the existing setup
